

DOCTOR BLADE PROTECTORS

Doctor blades are a key component within any flexo or gravure printing press, they wipe the excess ink off the anilox rollers and gravure cylinders. They are a highly engineered length of steel and should be handled with care by press operators. Once placed in the press, the blades can become razor sharp, with our blade protectors, you can be sure your employees are well protected.

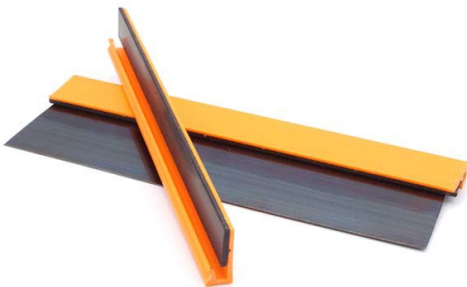

STANDARD WHITE PLASTIC PROTECTOR

Protect your employees and your doctor blade. Only available in a 30m coil, our standard white protector is designed for the user to cut down to their desired length. Allows safe handling of doctor blades, which can become very sharp once used. Also protects the doctor blade tip from any damage.

MAGNETIC ORANGE PLASTIC PROTECTOR

Protect your employees and your doctor blade. Only available pre-cut to your desired length. An upgrade to the standard white protector, the magnetic strip allows the protector to stay attached to the blade and is less likely to fall off. If you require these for flexographic doctor blade chambers, the length of the protector should be measured from the inside of each end seal. Allows safe handling of doctor blades, which can become very sharp once used. Also protects the doctor blade tip from any damage.
